

Sub-domain structure-function

- I. Create programming architecture allowing a 'string' of domains/sub-domains that all have VOICES current (as described in Site Flow, since some of that is still not functional) capabilities.
- II. Each level will have the ability of having its own unique graphics.
- III. There will be at least three levels of sub-domain linking. For example;
 - A. TeaParty.VoicesForChange.US (National level I)
 - B. NY.TeaParty.VoicesForChange.US (State level II)
 - C. Buffalo.NY.TeaParty.VoicesForChange.US (Local level III)

** Any level can have alpha or numeric characters in its identity, since there are numerous entities with the numeric “1776” in their name**
- IV. Each level will have all of the same sections/functions as current Affiliate pages i.e. “News”, “Bulletins” “Bills & Petitions” “Sponsors” and “Donate”.
- V. Each level will have a series of mail boxes that flash whenever one of the entities posts any 'article' on their page, and after viewing the article can click on the article and then “accept” the article which will then post the article on their page. (Within the domain string). When a group “accepts” an article from another, it is automatically posted in the appropriate section, i.e. “News” or “Petitions”
- VI. There needs to be a buffer between levels. For example, articles posted by Level III, will be 'alerted' to Level II, but will not be sent to Level I until accepted by Level II, EXCEPT in the case of Federal level Petitions created at Level I. State level petitions created at Level II will be alerted to all Level III groups within THAT state, and if 'accepted' at Level I will be alerted to Level II groups in other states.
 - A. State petition created by NY.TeaParty.voicesforchange.us will be alerted to all level III groups with NY state, and sent (alerted to TeaParty.voicesforchange.us), upon acceptance by Level I it will be alerted to all Level II organizations i.e. NJ.TeaParty.voicesforchange.us and (after editing to insert appropriate state abbreviation), can be signed by Level III members having NJ in their address data).
 - B. Petitions created at Level III will be alerted to all Level III within the state, as well as Level II. For example Albany.NY.TeaParty.voicesforchange.us will be alerted to; BuffaloNY.TeaParty.voicesforchange.us (level III) and NY.TeaParty.voicesforchange.us (level II). If Level II accepts it will then be alerted to Level I TeaParty.voicesforchange.us.

- VII. Each level can have a second series of mailboxes that identify other VOICES Affiliates that they identify with to be notified with the posting of articles on those other Affiliate pages. (I am assuming that this would be similar to the way Facebook notifies its members of “Friend” postings) The purpose is to allow groups with common goals on identifiable topics to collaborate. For example Tea Party groups will generally support 'right to life” groups on matters concerning abortion, as would evangelical groups. The affiliate can then select which section to post the article in, i.e. News, Bulletins or Petitions etc.
- VIII. The above functions re alerts should be programmed so that Affiliates that are not domain/sub-domain entities can use these alert functions within the current VOICES programming database/architecture through a selection process within the affiliates' dashboards.
- IX. The current VOICES function banner containing Bill Resources, FAQ About etc will appear on each domain/sub-domain page, but the ability to edit text in appropriate place will be provided. For example, each entity should be able to provide answers to FAQ pertinent to their organization, and “About” should describe their organization, as well.
- X. Each entity should contain a link to VOICES home page.
